## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9,11-17,20 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Myler, et al.-5474563.

Myler discloses a stent delivery system having a delivery means consisting of an outer sheath 60 which surrounds the stent in a reduced configuration, and deployment means in the form of a core 52,56 having two enlarged rings 62,66 which are larger in diameter than the inner diameter of the stent (since elements 216 which engage the rings are part of the stent). A handle, one part of which is the proximal end of 60 and the other part of which is attached to the proximal end of 52 and/or 56. The distal end of the outer sheath is an integral ring and could be used to assist compression of the stent.

08/873,484 Art Unit: 3731

## Response to Arguments

Applicant's arguments filed 10-25-2007 have been fully considered but they are not persuasive.

Applicant argues that Myler fails to disclose a ring on the end of the outer sheath. However, applicant's ring is just the distal tip of the sheath. Granted it appears as if it is thinner than the sheath, but nevertheless it is merely a ring at the end of the sheath. Similarly, Myler's end of the sheath also constitutes a ring, as it is an annular surface. The ring in this context is merely integral with the end of the sheath. That is to say, one could arbitrarily define what is shown in fig. 4 as a sheath which ends some distance from the end of element 60, and the very tip extending from that arbitrary end is the claimed ring. The only difference between applicant's ring and that of Myler is the thickness of the ring relative to the rest of the outer sheath. However, this difference is not claimed. Additionally, the examiner contends that the distal end of the outer sheath would be capable of assisting in stent compression, if one so desired, by merely retracting the inner members relative to the sheath 60, or moving the sheath distally over the inner members. As the distal end (ring) of the sheath contacted the stent or the halos, it would cause compression of the

Art Unit: 3731

stent and allow the stent to be withdrawn into the distal end of the outer sheath 60.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Glenn K. Dawson whose telephone number is 571-272-4694. The examiner can normally be reached on M-Th 7:30-5:00.
